

# Webserver

## Features

### Webserver

- 1000 MB Memory
- MySQL Database
- PHP
- FTP server
- Javaskript
- Syscp Administration
- Server statistics
- Mail Server
- Webmail

### Options

- CMS
- Java Runtime

The Webserver is virtual server which serves webspace for Applications and e-mails on the Internet.

The Hardware is plugged to a battery, the Harddrives are mirrored what makes tem fully redundant.

The Admin Application is easy to use. It provides user management, e- mail address management, subdomain management and FTP User management.

The Webmail provides a quick and easy e- mail management over the web from any location with any computer which is plugged to the internet.

Located on the FTP Server are Folders where users can upload or download shaerd data.

On the side of programming there are javaskript and php two modern and powerful programming languages.

With a Waterproof Webserver you save costs and energy on webdevelopment. The e- mails are stored on a save and powerfull enviroment and you can read, edit and write mails any place any time.

A CMS (Content Management System) can be integrated additionally. With our CMS you can edith your Webpage content easyally from the web.
